Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

A Look at Handling Qualities of Canard Configurations G87-024

Aeroelasticity

Interactions Between an Aircraft Structure and Active Control Systems G87-072
Stability Robustness Improvement Using Constrained Optimization Techniques G87-029

Avionics Systems

Development of a Takeoff Performance Monitoring System G87-070
Optimization of Cruise at Constant Altitude G87-018

Crew Stations

Investigation of Limb-Side Stick Dynamic Interaction with Roll Control G87-030

Flight Displays

Limited Evaluation of the Longitudinal Flying Qualities of a Centerstick Aircraft with Variations in Stick Feel Parameters G87-085

Flight Operations

Development of a Takeoff Performance Monitoring System G87-070
Optimization and Acceleration Guidance of Flight Trajectories in a Windshear G87-060
Optimization of Cruise at Constant Altitude G87-018

Ground Support

A Track Correlation Algorithm for Multi-Sensor Integration G87-028

Guidance and Control

Sensitivity of Closed-Loop Eigenvalues and Robustness G87-093
Energy Management of Three-Dimensional Minimum-Time Intercept G87-091
Eigensystem Sythesis for Active Flutter Suppression on an Oblique-Wing Aircraft G87-086
Method for Robust Design of Multivariable Feedback Systems G87-078
Interactions Between an Aircraft Structure and Active Control Systems G87-072
Accelerometer Placement in Active Flutter Suppression Systems G87-071
A Homotopy Approach to the Feedback Stabilization of Linear Systems G87-069
Time-Scale Synthesis of a Closed-Loop Discrete Optimal Control System G87-068
Optimization and Acceleration Guidance of Flight Trajectories in a Windshear G87-060
Gradient-Based Combined Structural and Control Optimization G87-049
Aircraft Automatic Flight Control System with Model Inversion G87-046
Design Methodology for Robust Stabilizing Controllers G87-043
Closed-Loop Pilot Vehicle Analysis of the Approach and Landing Task G87-031
Robust Controller Design Using Frequency Domain Constraints G87-027
Dynamics of a Cantilever Beam Attached to a Moving Base G87-025
A Look at Handling Qualities of Canard Configurations G87-024
Multivariable Control Robustness Examples: A Classical Approach G87-019
Optimization of Cruise at Constant Altitude G87-018
Linear-Quadratic-Gaussian with Loop-Transfer-Recovery Methodology for an Unmanned Aircraft G87-012
Application of Eigenstructure Assignment to Flight Control Design: Some Extensions G87-011
Nonlinear Flight Test Trajectory Controllers for Aircraft G87-010

Handling Qualities, Stability and Control

Limited Evaluation of the Longitudinal Flying Qualities of a Centerstick Aircraft with Variations in Stick Feel Parameters G87-085
Time-Scale Synthesis of a Closed-Loop Discrete Optimal Control System G87-068
Development and Application of a Convolution Technique for Flying Qualities Research G87-032
Closed-Loop Pilot Vehicle Analysis of the Approach and Landing Task G87-031
Investigation of Limb-Side Stick Dynamic Interaction with Roll Control G87-030
Stability Robustness Improvement Using Constrained Optimization Techniques G87-029

Navigation, Communication, and Traffic Control

Error Equations of Inertial Navigation G87-058

Performance

Energy Management of Three-Dimensional Minimum-Time Intercept G87-091
Development of a Takeoff Performance Monitoring System G87-070
Optimization and Acceleration Guidance of Flight Trajectories in a Windshear G87-060
Direct Trajectory Optimization Using Nonlinear Programming and Collocation G87-056
Nonlinear Flight Test Trajectory Controllers for Aircraft G87-010

Simulation

Time-Scale Synthesis of a Closed-Loop Discrete Optimal Control System G87-068
Development and Application of a Convolution Technique for Flying Qualities Research G87-032

Testing, Flight and Ground

Limited Evaluation of the Longitudinal Flying Qualities of a Centerstick Aircraft with Variations in Stick Feel Parameters G87-085
Design Study for a High-Accuracy Three-Axis Test Table G87-015
Nonlinear Flight Test Trajectory Controllers for Aircraft G87-010

Energy

Nuclear Fission

A Look at Handling Qualities of Canard Configurations G87-024

Fluid Dynamics

Hydrodynamics

Side Moment Exerted by a Two-Component Liquid Payload on a Spinning Projectile G87-003

Interdisciplinary Topics

Aerospace Technology Utilization

Design Study for a High-Accuracy Three-Axis Test Table G87-015

Analytical and Numerical Methods

Testing Matrices of Definiteness and Application Examples that Spawn the Need G87-079
Direct Trajectory Optimization Using Nonlinear Programming and Collocation G87-056
Gradient-Based Combined Structural and Control Optimization G87-049
Robust Controller Design Using Frequency Domain Constraints G87-027
Rotation of a Triaxial Satellite Near the Lagrangian Point L_4 G87-021
The Minimum for Geometric Dilution of Precision in Global Positioning System Navigation G87-017
Avoidance of Numerical Instabilities in Computation of Higher-Order Gravity G87-016
Application of Eigenstructure Assignment to Flight Control Design: Some Extensions G87-011
Stability of Multidimensional Linear Time-Varying Systems G85-101

Astrodynamics

Direct Trajectory Optimization Using Nonlinear Programming and Collocation G87-056

Subject Index

Interdisciplinary Topics

Aerospace Technology Utilization

Design Study for a High-Accuracy Three-Axis Test Table G87-015

Analytical and Numerical Methods

Testing Matrices of Definiteness and Application Examples that Spawn the Need G87-079
Direct Trajectory Optimization Using Nonlinear Programming and Collocation G87-056
Gradient-Based Combined Structural and Control Optimization G87-049
Robust Controller Design Using Frequency Domain Constraints G87-027
Rotation of a Triaxial Satellite Near the Lagrangian Point L_4 G87-021
The Minimum for Geometric Dilution of Precision in Global Positioning System Navigation G87-017
Avoidance of Numerical Instabilities in Computation of Higher-Order Gravity G87-016
Application of Eigenstructure Assignment to Flight Control Design: Some Extensions G87-011
Stability of Multidimensional Linear Time-Varying Systems G85-101

Astrodynamics

Direct Trajectory Optimization Using Nonlinear Programming and Collocation G87-056

Orbital Modifications Using Forced Tether-Length Variations G87-041
Accessibility of Near-Earth Asteroids G87-040
Avoidance of Numerical Instabilities in Computation of Higher-Order Gravity G87-016
Meter-Level Orbit Determination of Geosynchronous Satellites by an Economical Tracking System G87-007
Numerical Method for Rapidly Determining Satellite-Satellite and Satellite-Ground Station In-View Periods G87-005
Gravity Gradient Torque for an Arbitrary Potential Function G86-021

Celestial Mechanics

Accessibility of Near-Earth Asteroids G87-040
Rotation of a Triaxial Satellite Near the Lagrangian Point L_4 G87-021
Avoidance of Numerical Instabilities in Computation of Higher-Order Gravity G87-016

Computer Science

Fault-Tolerant Clock Synchronization Validation Methodology G87-083

Human Factors

Closed-Loop Pilot Vehicle Analysis of the Approach and Landing Task G87-031
Investigation of Limb-Side Stick Dynamic Interaction with Roll Control G87-030

Numerical Analysis

Testing Matrices of Definiteness and Application Examples that Spawn the Need G87-079
Identification of Large Space Structures: A Factorization Approach G87-074
Equations of Motion for Manuevering Flexible Spacecraft G87-073

Reliability, Maintainability, and Logistics Support

Fault-Tolerant Clock Synchronization Validation Methodology G87-083
Sensor-Failure Detection Method for Flexible Structures G87-075

Research Facilities and Instrumentation

Design Study for a High-Accuracy Three-Axis Test Table G87-015

Sensor Systems

A Track Correlation Algorithm for Multi-Sensor Integration G87-028
Charge Transfer Device Star Tracker Applications G87-014

State Estimation

Spacecraft Attitude Determination Using a Second-Order Nonlinear Filter G87-089
Testing Matrices of Definiteness and Application Examples that Spawn the Need G87-079
Mass Property Estimation for Control of Asymmetrical Satellites G87-076
Sensor-Failure Detection Method for Flexible Structures G87-075
Onboard Spin Axis Controller for a Geostationary Spin-Stabilized Satellite G87-048
Trajectory and Attitude Determination of a Thrusting Spin-Stabilized Apogee Stage G87-047
On-Line Aircraft State and Stability Derivative Estimation Using the Modified-Gain Extended Kalman Filter G87-045

Launch Vehicle Systems

An Optimal Q-Guidance Scheme for Satellite Launch Vehicles G87-008

Missile Systems

Time-Invariant Controllers for Target Tracking G87-055

Simulation

Modern Control Theory for Design of Autopilots for Bank-to-Turn Missiles G87-061
Comparison of Theory and Experiment for Moments Induced by Loose Internal Parts G87-002
ative Estimation Using the Modified-Gain Extended Kalman Filter G87-045
A New Method of Computing the State Trasition Matrix for Linear Systems G87-036
Recursive Attitude Determination from Vector Observations: Euler Angle Estimation G87-026
Investigation of Moving-Bank Multiple Model Adaptive Algorithms G87-013
Modeling Clear-Air Turbulence with Vortices Using Parameter-Identification Techniques G87-004

System Identification

Distributed Systems Approach to the Identification of Flexible Structures G87-087
On-Line Aircraft State and Stability Derivative Estimation Using the Modified-Gain Extended Kalman Filter G87-045
Modeling Clear-Air Turbulence with Vortices Using Parameter-Identification Techniques G87-004

Launch Vehicle and Missile (LV/M) Technology

Aerodynamics

Magnus Attenuation on a Generic Missile Configuration Using N-Vanes G87-051

Dynamics and Control

Sensitivity of Closed-Loop Eigenvalues and Robustness G87-093
Method for Robust Design of Multivariable Feedback Systems G87-078
A Homotopy Approach to the Feedback Stabilization of Linear Systems G87-069
Modern Control Theory for Design of Autopilots for Bank-to-Turn Missiles G87-061
Time-Invariant Controllers for Target Tracking G87-055
Magnus Attenuation on a Generic Missile Configuration Using N-Vanes G87-051
Dynamics of a Multibody System with Relative Translation on Curved, Flexible Tracks G87-050
Dynamics of a Cantilever Beam Attached to a Moving Base G87-025
Relationship Between Kane's Equations and the Gibbs-Appell Equations G87-020
Multivariable Control Robustness Examples: A Classical Approach G87-019
Analytical Solution of Optimal Trajectory-Shaping Guidance G87-009
Side Moment Exerted by a Two-Component Liquid Payload on a Spinning Projectile G87-003
Comparison of Theory and Experiment for Moments Induced by Loose Internal Parts G87-002

Guidance

Time-Invariant Controllers for Target Tracking G87-055
Optimal Descending, Hypersonic Turn to Heading G87-044
The Closed-Form Solution of Generalized Proportional Navigation G87-035
Recursive Attitude Determination from Vector Observations: Euler Angle Estimation G87-026
Analytical Solution of Optimal Trajectory-Shaping Guidance G87-009
An Optimal Q-Guidance Scheme for Satellite Launch Vehicles G87-008

Testing, Flight and Ground

Comparison of Theory and Experiment for Moments Induced by Loose Internal Parts G87-002

Trajectories and Tracking Systems

Trajectory and Attitude Determination of a Thrusting Spin-Stabilized Apogee Stage G87-047
Analytical Solution of Optimal Trajectory-Shaping Guidance G87-009

Vibration

Dynamics of a Cantilever Beam Attached to a Moving Base G87-025

Propulsion

Electric and Advanced Space Propulsion

Orbital Modifications Using Forced Tether-Length Variations G87-041

Spacecraft Technology

Attitude Determination

Spacecraft Attitude Determination Using a Second-Order Nonlinear Filter G87-089
Onboard Spin Axis Controller for a Geostationary Spin-Stabilized Satellite G87-048
Trajectory and Attitude Determination of a Thrusting Spin-Stabilized Apogee Stage G87-047
Recursive Attitude Determination from Vector Observations: Euler Angle Estimation G87-026
Charge Transfer Device Star Tracker Applications G87-014

Dynamics and Control

Sensitivity of Closed-Loop Eigenvalues and Robustness G87-093
Fuel-Optimal Rendezvous Near a Point in General Keplerian Orbit G87-090
Dynamics of Earth-Orbiting Flexible Satellites with Multibody Components G87-088
Model Reference Adaptive Control for Large Structural Systems G87-081
Symmetric Kinematic Transformation Pair Using Euler Parameters G87-080
Method for Robust Design of Multivariable Feedback Systems G87-078
Mass Property Estimation for Control of Asymmetrical Satellites G87-076
Sensor-Failure Detection Method for Flexible Structures G87-075
Identification of Large Space Structures: A Factorization Approach G87-074
Equations of Motion for Manuevering Flexible Spacecraft G87-073

A New Approach to the Space-Axis Rotation G87-066
Perturbation Analysis of Internal Balancing for Lightly Damped Mechanical Systems with Gyroscopic and Circulatory Forces G87-065
Dynamics of Gyroelastic Spacecraft G87-064
Robust Multivariable Control of Large Space Structures Using Positivity G87-063
Effects of Atmosphere on Slewing Control of a Flexible Structure G87-062
Parameter-Insensitive Technique for Aircraft Sensor Fault Analysis G87-059
Reduced-Order Pulse-Motor Ignition Control Logic G87-057
Improved Method for the Initial Attitude Acquisition Maneuver G87-053
Dynamics of a Multibody System with Relative Translation on Curved, Flexible Tracks G87-050
Onboard Spin Axis Controller for a Geostationary Spin-Stabilized Satellite G87-048
A Three-Mass Tethered System for Micro-g/Variable-g Applications G87-042
Orbital Modifications Using Forced Tether-Length Variations G87-041
A New Method of Computing the State Trasition Matrix for Linear Systems G87-036
Configuration Tradeoffs for the Space Infrared Telescope Facility Pointing Control System G87-034
Robust Controller Synthesis for a Large Flexible Space Antenna G87-033
Stability Robustness Improvement Using Constrained Optimization Techniques G87-029
Robust Controller Design Using Frequency Domain Constraints G87-027
Relationship Between Kane's Equations and the Gibbs-Appell Equations G87-020
Optimized Rotation-Axis Attitude Maneuver Controller for the Space Shuttle Orbiter G87-001
Gravity Gradient Torque for an Arbitrary Potential Function G86-021
Stability of Multidimensional Linear Time-Varying Systems G85-101

Earth-Orbital Trajectories

Fuel-Optimal Rendezvous Near a Point in General Keplerian Orbit G87-090
A Common-Period Four-Satellite Continuous Global Coverage Constellation G87-077
Meter-Level Orbit Determination of Geosynchronous Satellites by an Economical Tracking System G87-007
Long-Term Evolution of Near-Geostationary Orbits G86-062

Entry Vehicle Dynamics and Control

Optimal Re-Entry Maneuvers with Bounded Lift Control G87-054

Entry Vehicle Guidance

Optimal Re-Entry Maneuvers with Bounded Lift Control G87-054

Mission Analysis

Accessibility of Near-Earth Asteroids G87-040

Navigation, Guidance, and Flight-Path Control

Fuel-Optimal Rendezvous Near a Point in General Keplerian Orbit G87-090
Evaluation Method of Polynomial Models' Prediction Performance for Random Clock Error G87-084
Analysis of the Geometric Dilution of Precision Using the Eigenvalue Approach G87-082
A Common-Period Four-Satellite Continuous Global Coverage Constellation G87-077
Error Equations of Inertial Navigation G87-058
Aircraft Automatic Flight Control System with Model Inversion G87-046
The Minimum for Geometric Dilution of Precision in Global Positioning System Navigation G87-017
Using Delta Differential One-Way Range to Determine Highly Elliptical Earth Orbits G87-006

Signatures and Tracking

Investigation of Moving-Bank Multiple Model Adaptive Algorithms G87-013
Meter-Level Orbit Determination of Geosynchronous Satellites by an Economical Tracking System G87-007

Simulation

Dynamics of a Multibody System with Relative Translation on Curved, Flexible Tracks G87-050
A Three-Mass Tethered System for Micro-g/Variable-g Applications G87-042

Space Station Systems, Manned

Distributed Systems Approach to the Identification of Flexible Structures G87-087

Systems

A Three-Mass Tethered System for Micro-g/Variable-g Applications G87-042

Testing, Flight and Ground

Closed-Form Solution for a Class of Guidance Laws G87-067

Structural Mechanics and Materials

Aeroelasticity and Hydroelasticity

Interactions Between an Aircraft Structure and Active Control Systems G87-072
Accelerometer Placement in Active Flutter Suppression Systems G87-071

Structural Design

Re-examination of Eigenvector Derivatives G87-092
Gradient-Based Combined Structural and Control Optimization G87-049

Structural Dynamics

Re-examination of Eigenvector Derivatives G87-092
Distributed Systems Approach to the Identification of Flexible Structures G87-087
Identification of Large Space Structures: A Factorization Approach G87-074
Equations of Motion for Manuevering Flexible Spacecraft G87-073
Dynamics of Gyroelastic Spacecraft G87-064
New Time-Domain Identification Technique G87-052
Stability of Multidimensional Linear Time-Varying Systems G85-101

Structural Stability

Re-examination of Eigenvector Derivatives G87-092
Model Reference Adaptive Control for Large Structural Systems G87-081
Symmetric Kinematic Transformation Pair Using Euler Parameters G87-080

Chronological Index

G85-101 Stability of Multidimensional Linear Time-Varying Systems. Shashi K. Shrivastava and S. Pradeep, *Indian Institute of Science* (**8**, 5, p. 579) Article based on AIAA Paper 84-1954 CP848
Technical Comment by Peter C. Müller, *University of Wuppertal, Federal Republic of Germany* (**10**, 1, p. 127)
Reply (**10**, 1, p. 127)

G86-021 Gravity Gradient Torque for an Arbitrary Potential Function. David R. Glandorf, *Lockheed Engineering and Management Services Company* (**9**, 1, p. 122) Engineering Note
Technical Comment by James C. Wilcox, *TRW Space and Technology Group* (**10**, 2, p. 224)

G86-062 Long-Term Evolution of Near-Geostationary Orbits. Jozef C. Van der Ha, *European Space Operations Center, Federal Republic of Germany* (**9**, 3, p. 363) Article
Reply (**10**, 2, p. 223)
Technical Comment by P. Cefola, *The Charles Stark Draper Laboratory* (**10**, 2, p. 222)

G87-001 Optimized Rotation-Axis Attitude Maneuver Controller for the Space Shuttle Orbiter. D. C. Redding and N. J. Adams, *The Charles Stark Draper Laboratory* (**10**, 1, p. 4) Article

G87-002 Comparison of Theory and Experiment for Moments Induced by Loose Internal Parts. William P. D'Amico Jr., *U. S. Army Ballistic Research Laboratory, Aberdeen Proving Ground* (**10**, 1, p. 14) Article based on AIAA Paper 85-1826 CP857

G87-003 Side Moment Exerted by a Two-Component Liquid Payload on a Spinning Projectile. Charles H. Murphy, *U. S. Army Laboratory Command, Ballistic Research Laboratory, Aberdeen Proving Ground* (**10**, 1, p. 20) Article based on AIAA Paper 84-2115 CP849

G87-004 Modeling Clear-Air Turbulence with Vortices Using Parameter-Identification Techniques. Rajiv S. Mehta, *NASA Ames Research Center* (**10**, 1, p. 27) Article based on AIAA Paper 84-2083 CP849

G87-005 Numerical Method for Rapidly Determining Satellite-Satellite and Satellite-Ground Station In-View Periods. J. A. Lawton, *U. S. Naval Surface Weapons Center* (**10**, 1, p. 32) Article based on AIAA Paper 86-0086

G87-006 Using Delta Differential One-Way Range to Determine Highly Elliptical Earth Orbits. Raymond B. Frauenholz, *Jet Propulsion Laboratory* (**10**, 1, p. 37) Article

G87-007 Meter-Level Orbit Determination of Geosynchronous Satellites by an Economical Tracking System. Robert D. Culp, *University of Colorado*; and Ting-Hua Wang, *Chung Shan Institute of Science and Technology, Taiwan* (**10**, 1, p. 45) Article based on AIAA Paper 85-1919 CP856

G87-008 An Optimal Q-Guidance Scheme for Satellite Launch Vehicles. M. Seetharama Bhat and Shashi K. Shrivastava, *Indian Institute of Science* (**10**, 1, p. 53) Article

G87-009 Analytical Solution of Optimal Trajectory-Shaping Guidance. C. F. Lin, *Boeing Company*; and L. L. Tsai, *American GNC Corporation* (**10**, 1, p. 61) Article based on AIAA Paper 85-1958 CP856

G87-010 Nonlinear Flight Test Trajectory Controllers for Aircraft. P. K. A. Menon, M. E. Badgett and R. A. Walker, *Integrated Systems, Inc.*; and E. L. Duke, *NASA Ames-Dryden Flight Research Facility* (**10**, 1, p. 67) Article based on AIAA Paper 85-1890 CP856

G87-011 Application of Eigenstructure Assignment to Flight Control Design: Some Extensions. Kenneth M. Sobel, *Lockheed California Company*; and Eliezer Y. Shapiro, *HR Textron* (**10**, 1, p. 73) Article

G87-012 Linear-Quadratic-Gaussian with Loop-Transfer-Recovery Methodology for an Unmanned Aircraft. D. Brett Ridgely, *Massachusetts Institute of Technology*; Siva S. Banda, Timothy E. McQuade and P. J. Lynch, *Flight Dynamics Laboratory, Wright-Patterson Air Force Base* (**10**, 1, p. 82) Article based on AIAA Paper 85-1927 CP856

G87-013 Investigation of Moving-Bank Multiple Model Adaptive Algorithms. Peter S. Maybeck, *U. S. Air Force Institute of Technology, Wright-Patterson Air Force Base*; and Karl P. Hentz, *U. S. Force Institute of Technology, Wright-Patterson Air Force Base* (**10**, 1, p. 90) Article

G87-014 Charge Transfer Device Star Tracker Applications. R. A. Deters and R. L. Gutshall, *Ball Aerospace Systems Division* (**10**, 1, p. 97) Article based on AIAA Paper 84-1851 CP848

G87-015 Design Study for a High-Accuracy Three-Axis Test Table. Louis A. DeMore, Robert A. Peterson, Louis B. Conley, Howard H. Havliscek, Nikos P. Andrianos, David H. Ditto and Joseph Profeta III, *Contraves Goerz Corporation* (**10**, 1, p. 104) Article based on AIAA Paper 85-1893 CP856

G87-016 Avoidance of Numerical Instabilities in Computation of Higher-Order Gravity. Joseph Parsons and David Stewart, *Logicon, Inc.* (**10**, 1, p. 115) Engineering Note

G87-017 The Minimum for Geometric Dilution of Precision in Global Positioning System Navigation. Bertrand T. Fang, *The Analytic Sciences Corporation* (**10**, 1, p. 116) Engineering Note

G87-018 Optimization of Cruise at Constant Altitude. Colin N. Gordon, *Delco Systems Operations* (**10**, 1, p. 116) Engineering Note

G87-019 Multivariable Control Robustness Examples: A Classical Approach. Bong Wie, *The University of Texas at Austin*; and Arthur E. Bryson Jr., *Stanford University* (**10**, 1, p. 118) Engineering Note

G87-020 Relationship Between Kane's Equations and the Gibbs-Appell Equations. Edward A. Desloge, *Florida State University* (**10**, 1, p. 120) Engineering Note
Technical Comment by David A. Levinson, *Lockheed Palo*

Alto Research Laboratory (**10**, 6, p. 593)
Technical Comment by J. E. Keat, *Photon Research Associates, Inc.* (**10**, 6, p. 594)
Technical Comment by Dan E. Rosenthal, *Symbolic Dynamics* (**10**, 6, p. 595)
Technical Comment by Arun K. Banerjee, *Lockheed Missiles & Space Company* (**10**, 6, p. 597)

G87-021 Rotation of a Triaxial Satellite Near the Lagrangian Point L_4. Antonio Elipe, *Universidad de Zaragoza, Spain* (**10**, 1, p. 122) Engineering Note

G87-024 A Look at Handling Qualities of Canard Configurations. Seth B. Anderson, *NASA Ames Research Center* (**10**, 2, p. 129) Survey Paper based on AIAA Paper 85-1803 CP857

G87-025 Dynamics of a Cantilever Beam Attached to a Moving Base. T. R. Kane and R. R. Ryan, *Stanford University*; and A. K. Banerjee, *Lockheed Missiles and Space Company* (**10**, 2, p. 139) Article

G87-026 Recursive Attitude Determination from Vector Observations: Euler Angle Estimation. I. Y. Bar-Itzhack and M. Idan, *Technion-Israel Institute of Technology, Israel* (**10**, 2, p. 152) Article based on AIAA Paper 85-1959 CP856

G87-027 Robust Controller Design Using Frequency Domain Constraints. R. D. Hefner, *The Aerospace Corporation*; and D. L. Mingori, *University of California* (**10**, 2, p. 158) Article

G87-028 A Track Correlation Algorithm for Multi-Sensor Integration. Michitaka Kosaka, Shoji Miyamoto and Hirokazu Ihara, *Hitachi Ltd., Japan* (**10**, 2, p. 166) Article

G87-029 Stability Robustness Improvement Using Constrained Optimization Techniques. V. Mukhopadhyay, *Joint Institute for Advancement of Flight Sciences, NASA Langley Research Center* (**10**, 2, p. 172) Article based on AIAA Paper 85-1931 CP856

G87-030 Investigation of Limb-Side Stick Dynamic Interaction with Roll Control. Donald E. Johnston and Duane T. McRuer, *Systems Technology, Inc.* (**10**, 2, p. 178) Article based on AIAA Paper 85-1853 CP856

G87-031 Closed-Loop Pilot Vehicle Analysis of the Approach and Landing Task. Mark R. Anderson and David K. Schmidt, *Purdue University* (**10**, 2, p. 187) Article based on AIAA Paper 85-1851 CP856

G87-032 Development and Application of a Convolution Technique for Flying Qualities Research. H. T. Breul, T. L. Keller and R. C. Weston, *Grumman Corporate Research Center* (**10**, 2, p. 195) Article based on AIAA Paper 85-3062

G87-033 Robust Controller Synthesis for a Large Flexible Space Antenna. N. Sundararajan, *Old Dominion University Research Foundation*; S. M. Joshi and E. S. Armstrong, *NASA Langley Research Center* (**10**, 2, p. 201) Article

G87-034 Configuration Tradeoffs for the Space Infrared Telescope Facility Pointing Control System. A. J. Pue, K. Strohbehn and J. W. Hunt, *The Johns Hopkins University, Applied Physics Laboratory* (**10**, 2, p. 209) Article based on AIAA Paper 85-1856 CP856

G87-035 The Closed-Form Solution of Generalized Proportional Navigation. Ciann-Dong Yang and Fang-Bo Yeh, *National Cheng Kung University, Taiwan*; and Jen-Heng Chen, *Chung Shan Institute of Science and Technology, Taiwan* (**10**, 2, p. 216) Engineering Note

G87-036 A New Method of Computing the State Trasition Matrix for Linear Systems. Thomas V. Huynh, Donald L. Hitzl and John J. Kohfeld, *Lockheed Research Laboratory* (**10**, 2, p. 218) Engineering Note

G87-040 Accessibility of Near-Earth Asteroids. C. O. Lau, *Jet Propulsion Laboratory*; and N. D. Hulkower, *TRW Inc.* (**10**, 3, p. 225) Article

G87-041 Orbital Modifications Using Forced Tether-Length Variations. Manuel Martinez-Sanchez and Sarah A. Gavit, *Massachusetts Institute of Technology* (**10**, 3, p. 233) Article

G87-042 A Three-Mass Tethered System for Micro-*g*/Variable-*g* Applications. Enrico C. Lorenzini, *Harvard-Smithsonian Center for Astrophysics* (**10**, 3, p. 242) Article based on AIAA Paper 86-1990 CP867

G87-043 Design Methodology for Robust Stabilizing Controllers. William E. Schmitendorf, *Northwestern University* (**10**, 3, p. 250) Article

G87-044 Optimal Descending, Hypersonic Turn to Heading. G. Richard Eisler, *Sandia National Laboratories*; and David G. Hull, *University of Texas at Austin* (**10**, 3, p. 255) Article

G87-045 On-Line Aircraft State and Stability Derivative Estimation Using the Modified-Gain Extended Kalman Filter. Jason L. Speyer and Edwin Z. Crues, *University of Texas at Austin* (**10**, 3, p. 262) Article based on AIAA Paper 85-1762 CP857

G87-046 Aircraft Automatic Flight Control System with Model Inversion. G. Allan Smith and George Meyer, *NASA Ames Research Center* (**10**, 3, p. 269) Article based on AIAA Paper 84-2627 CP8411

G87-047 Trajectory and Attitude Determination of a Thrusting Spin-Stabilized Apogee Stage. V. Adimurthy, P.V. Subba Raju and D.R. Manohar, *Vikram Sarabhai Space Center, India* (**10**, 3, p. 276) Article

G87-048 Onboard Spin Axis Controller for a Geostationary Spin-Stabilized Satellite. Carl Leei Chen, Loren I. Slafer and W. F. Hummel Jr., *Hughes Aircraft Company* (**10**, 3, p. 283) Article based on AIAA Paper 86-1984 CP869

G87-049 Gradient-Based Combined Structural and Control Optimization. David F. Miller and Jaedong Shim, *Wright State University* (**10**, 3, p. 291) Article

G87-050 Dynamics of a Multibody System with Relative Translation on Curved, Flexible Tracks. Dechang Li, *East China Institute of Technology, China*; and Peter W. Likins, *Lehigh University* (**10**, 3, p. 299) Article
Errata (**10**, 6, p. 598)

G87-051 Magnus Attenuation on a Generic Missile Configuration Using N-Vanes. R.L. Kittyle, *U. S. Eglin Air Force Base* (**10**, 3, p. 307) Article based on AIAA Paper 86-2082 CP868

G87-052 New Time-Domain Identification Technique. Fang-Bo Yeh and Ciann-Dong Yang, *National Chen Kung University, Taiwan* (**10**, 3, p. 313) Engineering Note

G87-053 Improved Method for the Initial Attitude Acquisition Maneuver. John Weissberg and Keiken Ninomiya, *Institute of Space and Astronautical Science, Japan* (**10**, 3, p. 316) Engineering Note

G87-054 Optimal Re-Entry Maneuvers with Bounded Lift Control. L. Beiner, *Tel Aviv University, Israel* (**10**, 4, p. 321)

Article

G87-055 Time-Invariant Controllers for Target Tracking. B. E. Gardner, *The Aerospace Corporation*; R. H. Cannon Jr. and Arthur E. Bryson Jr., *Stanford University* (**10**, 4, p. 330) Article based on AIAA Paper 84-1926 CP848

G87-056 Direct Trajectory Optimization Using Nonlinear Programming and Collocation. C. R. Hargraves and Paris S. W., *Boeing Aerospace Company* (**10**, 4, p. 338) Article

G87-057 Reduced-Order Pulse-Motor Ignition Control Logic. V. H. L. Cheng, *NASA Ames Research Center*; P. K. A. Menon, *Georgia Institute of Technology*; N. K. Gupta and M. M. Briggs, *Integrated Systems* (**10**, 4, p. 343) Article based on AIAA Paper 85-0500

G87-058 Error Equations of Inertial Navigation. George Arshal, *Federal Way, Washington* (**10**, 4, p. 351) Article

G87-059 Parameter-Insensitive Technique for Aircraft Sensor Fault Analysis. R. J. Patton and S. W. Willcox, *University of York, England*; and J. S. Winter, *Royal Aircraft Establishment, England* (**10**, 4, p. 359) Article

G87-060 Optimization and Acceleration Guidance of Flight Trajectories in a Windshear. A. Miele and T. Wang, *Rice University*; and W. W. Melvin, *Delta Airlines* (**10**, 4, p. 369) Article based on AIAA Paper 86-2036 CP869

G87-061 Modern Control Theory for Design of Autopilots for Bank-to-Turn Missiles. Douglas E. Williams and Bernard Friedland, *The Singer Company*; and Appasaheb N. Madiwale, *MIT Lincoln Laboratories* (**10**, 4, p. 378) Article

G87-062 Effects of Atmosphere on Slewing Control of a Flexible Structure. Jer-Nan Juang and Lucas G. Horta, *NASA Langley Research Center* (**10**, 4, p. 387) Article based on AIAA Paper 86-1001 CP863

G87-063 Robust Multivariable Control of Large Space Structures Using Positivity. M. D. McLaren and G. L. Slater, *University of Cincinnati* (**10**, 4, p. 393) Article

G87-064 Dynamics of Gyroelastic Spacecraft. G. M. T. D'Eleuterio and P. C. Hughs, *University of Toronto, Canada* (**10**, 4, p. 401) Article based on AIAA Paper 85-0731 CP851

G87-065 Perturbation Analysis of Internal Balancing for Lightly Damped Mechanical Systems with Gyroscopic and Circulatory Forces. P. A. Blelloch, D. L. Mingori and J. D. Wei, *University of California at Los Angeles* (**10**, 4, p. 406) Article

G87-066 A New Approach to the Space-Axis Rotation. Bong Wie, *University of Texas* (**10**, 4, p. 411) Engineering Note

G87-067 Closed-Form Solution for a Class of Guidance Laws. Ciann-Dong Yang and Fang-Bo Yeh, *National Cheng Kung University, Taiwan* (**10**, 4, p. 412) Engineering Note

G87-068 Time-Scale Synthesis of a Closed-Loop Discrete Optimal Control System. D. S. Naidu and D. B. Price, *NASA Langley Research Center* (**10**, 5, p. 417) Article based on AIAA Paper 86-1995 CP869

G87-069 A Homotopy Approach to the Feedback Stabilization of Linear Systems. Pierre T. Kabamba, *University of Michigan*; Richard W. Longman and Sun Jian-Guo, *Columbia University* (**10**, 5, p. 422) Article

G87-070 Development of a Takeoff Performance Monitoring System. R. Srivatsan and David R. Downing, *University of Kansas*; and Wayne H. Bryant, *NASA Langley Research Center* (**10**, 5, p. 433) Article based on AIAA Paper 86-2145 CP869

G87-071 Accelerometer Placement in Active Flutter Suppression Systems. Bradley S. Liebst, *University of Minnesota* (**10**, 5, p. 441) Article

G87-072 Interactions Between an Aircraft Structure and Active Control Systems. R. Freymann, *DFVLR Institute of Aeroelasticity, Federal Republic of Germany* (**10**, 5, p. 447) Article based on AIAA Paper 86-0960 CP863

G87-073 Equations of Motion for Manuevering Flexible Spacecraft. Meirovitch L. and R. D. Quinn, *Virginia Polytechnic Institute and State University* (**10**, 5, p. 453) Article

G87-074 Identification of Large Space Structures: A Factorization Approach. Trevor Williams, *Kingston Polytechnic, England* (**10**, 5, p. 466) Article

G87-075 Sensor-Failure Detection Method for Flexible Structures. H. Baruh and K. Choe, *Rutgers University* (**10**, 5, p. 474) Article

G87-076 Mass Property Estimation for Control of Asymmetrical Satellites. E. V. Bergmann, *The Charles Stark Draper Laboratory, Inc.*; B. K. Walker, *University of Cincinnati*; and D. R. Levy, *U. S. Air Force Space Division* (**10**, 5, p. 483) Article based on AIAA Paper 85-1857 CP856

G87-077 A Common-Period Four-Satellite Continuous Global Coverage Constellation. J. E. Draim, *Science and Technology Associates Inc.* (**10**, 5, p. 492) Article

G87-078 Method for Robust Design of Multivariable Feedback Systems. A. Dickman, *Tadiran, Ltd., Israel* (**10**, 5, p. 500) Engineering Note

G87-079 Testing Matrices of Definiteness and Application Examples that Spawn the Need. Thomas H. Kerr, *Intermetrics Inc.* (**10**, 5, p. 503) Engineering Note

G87-080 Symmetric Kinematic Transformation Pair Using Euler Parameters. I. M. Ross and R. G. Melton, *Pennsylvania State University* (**10**, 5, p. 506) Engineering Note

G87-081 Model Reference Adaptive Control for Large Structural Systems. I. H. Mufti, *National Research Council, Canada* (**10**, 5, p. 507) Engineering Note

G87-082 Analysis of the Geometric Dilution of Precision Using the Eigenvalue Approach. Mitchitaka Kosaka, *Systems Development Laboratory, Hitachi Ltd., Japan* (**10**, 5, p. 509) Engineering Note

G87-083 Fault-Tolerant Clock Synchronization Validation Methodology. Ricky W. Butler, Daniel L. Palumbo and Sally C. Johnson, *NASA Langley Research Center* (**10**, 6, p. 513) Article

G87-084 Evaluation Method of Polynomial Models' Prediction Performance for Random Clock Error. Michitaka Kosaka, *Hitachi, Ltd., Japan* (**10**, 6, p. 523) Article

G87-085 Limited Evaluation of the Longitudinal Flying Qualities of a Centerstick Aircraft with Variations in Stick Feel Parameters. William M. Quinn Jr., *U. S. Air Force Headquarters, Pentagon*; and Malcolm A. Cutchins, *Auburn*

University (**10**, 6, p. 528) Article

G87-086 Eigensystem Sythesis for Active Flutter Suppression on an Oblique-Wing Aircraft. Gorbux S. Alag, *Western Michigan University*; and John J. Burken, *NASA Ames Research Center* (**10**, 6, p. 535) Article based on AIAA Paper 86-2243 CP869

G87-087 Distributed Systems Approach to the Identification of Flexible Structures. K. Y. Lee, *Pennsylvania State University*; and S. A. Hossian, *TRW Space and Technology* (**10**, 6, p. 540) Article

G87-088 Dynamics of Earth-Orbiting Flexible Satellites with Multibody Components. L. Vu-Quoc and J. C. Simo, *Stanford University* (**10**, 6, p. 549) Article

G87-089 Spacecraft Attitude Determination Using a Second-Order Nonlinear Filter. S. Vathsal, *NASA Goddard Space Flight Center* (**10**, 6, p. 559) Article

G87-090 Fuel-Optimal Rendezvous Near a Point in General Keplerian Orbit. Thomas Carter, *Eastern Connecticut State University*; and Mayer Humi, *Worcester Polytechnic University* (**10**, 6, p. 567) Article

G87-091 Energy Management of Three-Dimensional Minimum-Time Intercept. Hindrikus G. Visser, Henry J. Kelley and Eugene M. Cliff, *Virginia Polytechnic Institute and State University* (**10**, 6, p. 574) Article based on AIAA Paper 85-1781 CP857

G87-092 Re-examination of Eigenvector Derivatives. K. B. Lim and J. L. Junkins, *Texas A&M University*; and B. P. Wang, *University of Texas* (**10**, 6, p. 581) Article

G87-093 Sensitivity of Closed-Loop Eigenvalues and Robustness. A. Adamian and J. S. Gibson, *University of California at Los Angeles* (**10**, 6, p. 588) Engineering Note

Notice to Subscribers

We apologize that this issue was mailed to you late. As you may know, AIAA recently relocated its headquarters staff from New York, N.Y. to Washington, D.C., and this has caused some unavoidable disruption of staff operations. We will be able to make up some of the lost time each month and should be back to our normal schedule, with larger issues, in just a few months. In the meanwhile, we appreciate your patience.
